Cœur de métier

PHASE 1 Développement des compétences

Throughout my academic and professional journey, I have established ambitious yet attainable goals, including the completion of a PhD in virology with a focus on the genomic surveillance of emerging viruses. I have consistently sought opportunities to enhance my employability through diverse training in scientific writing, intellectual property, university pedagogy, and clinical research. My engagement in both national and international conferences, such as those in Tokyo-Japan, has further expanded my competencies. I have studied in both Morocco and France, and I remain open to new opportunities for growth and collaboration.

PHASE 1 Évaluation

I have developed my skills in evaluating various documents within my field of expertise through rigorous scientific monitoring and conducting molecular biology and virology experiments. I critically assess scientific literature to inform my research on emerging pathogenic viruses, ensuring that my work is grounded in the latest findings. Through the presentation and analysis of results, I have honed my ability to evaluate my outcomes in terms of quality and added value, taking feedback from specialized and non-specialized audiences into account. This experience has prepared me to articulate my ideas to a critical audience and to evaluate the work of others by providing rational and realistic assessments.

PHASE 1 Gestion de l'information

I developed the ability to conduct comprehensive literature reviews and assess current scientific knowledge through rigorous scientific monitoring in virology and molecular biology. I efficiently utilize various research methods, identifying appropriate bibliographic resources, including academic journals and patent databases, to gather relevant information. My experience in writing and publishing peer-reviewed papers has honed my skills in critically evaluating the reliability and relevance of sources.

Qualités personnelles et relationnelles

PHASE 1 Collaboration

I developed my collaboration skills through interdisciplinary projects, notably the Emereau project under the GIS OBEPINE initiative. Collaborating with diverse teams across laboratories enhanced our efforts in wastewater-based epidemiology, crucial for monitoring emerging viral threats. This teamwork not only strengthened our collective impact but also led to my publication as the first author in a peer-reviewed scientific journal.

PHASE 1 Analyse, synthèse et esprit critique

I developed my analytical, synthetic, and critical thinking skills through my passion for data collection and analysis, which allows me to gain clearer insights and draw meaningful conclusions. By carefully selecting credible sources, I have honed my ability to synthesize

complex information effectively. This skill is evidenced by my first publication as a first author during my Master's internship, followed by multiple publications during my PhD, as a review focusing on metadata literature. These experiences have reinforced my intellectual rigor and ability to articulate essential ideas clearly, ensuring I can prioritize information based on specific objectives.
